PERSONAL STATEMENT

Recent Computer Science graduate from the University of Auckland with full-stack experience across internships and projects. Built web applications and RESTful APIs with Vue 3, React, FastAPI, Spring Boot, and PostgreSQL. Experienced with AI-assisted development, deployment on Supabase, Railway, and Cloudflare, and basic operations and troubleshooting.

EDUCATION

University of Auckland — Auckland, New Zealand
Bachelor of Science, Computer Science — Feb 2024 - Nov 2026

- *Relevant Coursework: Data Structures & Algorithms, Computer Organization, Operating Systems, Discrete Mathematics, Software Engineering, Large-Scale Software Development*

INTERNSHIP EXPERIENCE

Huaqin Technology — Wuxi, China
Software Developer Intern — Nov 2024 – Feb 2025

- Developed frontend modules for an IVI (in-vehicle infotainment) backend management system using Vue 3 and Element Plus, supporting carousel submission, approval, search, configuration, and status tracking.
- Built reusable, data-driven UI components to improve consistency and usability across content management workflows.
- Developed and enhanced frontend pages for an internal organizational management system based on business requirements.

NTT DATA — Wuxi, China
Software Developer Intern — Nov 2025 – Feb 2026

- Developed a full-stack internal invoice query system based on OCR data using Vue 3, Spring Boot, and PostgreSQL.
- Implemented multi-condition search, pagination, and detail views aggregating OCR, invoice, and order data across multiple tables using JdbcTemplate and dynamic SQL.
- Built Redis-backed token authentication with frontend route guards and backend interceptors, and added CSV export and search-condition caching.

PROJECT EXPERIENCE

OpenInvite — *OpenInvite*
Full-Stack Developer | Tech Lead | UOA Capstone — Mar 2026 – Jun 2026

- Co-developed and deployed a mentorship matching platform using Next.js 16, React, TypeScript, FastAPI, SQLAlchemy, and PostgreSQL, following a route-service-repository backend architecture and typed frontend API modules.
- Implemented OAuth 2.0 Google Calendar integration for calendar selection, event caching, and availability import, and generated Google Meet sessions through a platform-owned calendar with booking synchronization.
- Engineered PostgreSQL-backed booking and invitation workflows supporting custom meeting times, batch accept/decline, server-side availability splitting, rescheduling, and in-app notifications.
- Improved dashboard and mentor-profile performance by replacing multiple frontend requests with aggregated FastAPI endpoints and optimized PostgreSQL queries; also implemented JWT cookie authentication, email verification, Google sign-in, and route protection.

SKILLS

Programming: Python, Java, JavaScript, TypeScript
Frontend: Next.js, Vue.js (2/3), Element Plus, React
Backend & Database: Spring Boot, Node.js, Flask, FastAPI, ASP.NET, Hono(TypeScript), PostgreSQL, MySQL
Tools: Git, Docker, CI/CD, Cloudflare, Railway, Figma, Google OAuth 2.0, Supabase
